ITO Launches TAX System

TAX 10.

ITO Europe Ltd and its Japanese parent company Ito Koki, which changed its name to the ITO Corporation in April, will be exhibiting on booths 25/26 at the AEGPL Congress 2014 on May 14–15 in Genoa, Italy.

ITO Europe director Neil Ormrod said: “The company has been a key supporter of the AEGPL for many years and will be exhibiting again in Genoa in May. The exhibition stand will feature, amongst other things, the ecoRizer air

heating vaporiser, which, with no running costs and no carbon emissions, is the most eco-friendly and cost effective solution to lpg vaporisation. Also, the award-winning PA system, which mixes propane with air to produce a synthetic natural gas and is fully approved for sale within Europe, will be demonstrated and the HLB leak detection system for underground piping will be introduced.

“The exhibition will also be

the launch pad for the new TAX 10 OPSO automatic changeover system with remote telemetry, which has recently been added to the wide range of automatic changeovers with and without telemetry. The TAX system is compatible with most telemetry interface systems and offers many logistics advantages, as well as peace of mind for end users.”
